

## **IN THE SPECIFICATION**

### **In the Drawings**

The Examiner has requested new corrected drawings. Claim 57 recites, “The method of claim 35 further comprises disposing one or more of a rivet, rod, staple, and wire through the first conductor and the second conductor to attach the first conductor to the second conductor.” The Examiner stated that the drawings must show every feature of the invention specified in the claims.

Applicant respectfully submits that at least Figures 17B-17C illustrate small and sharp (291) used to create and/or enhance the electrical and mechanical connection between the first and second conductors 140 and 240. See also Applicant’s Specification at [076]. Additionally, at [080], it is stated that the first conductor can be coupled to the second conductor directly without conductive medium (e.g., can be seen in Figure 17B) and mechanical bonding techniques can be used to create such the connection. Further, rivet, rod, staple or wire can be the use for such mechanical bonding. Therefore, the particles 291 of Figure 17B can be used to illustrate such rivet, rod, staple or wire, in some embodiments.

Applicant submits that for that reason above that the drawings illustrate the elements of claim 57.
